DETAILED ACTION

Election/Restrictions

1. Applicant's election of Fourth Embodiment (drawn to Figure 9), claim 4 in Paper No. 11/06/2003 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Oath/Declaration

3. The oath or declaration filed on 02/15/2002 is acceptable.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 4 is rejected under 35 U.S.C. 102(e) as being anticipated by Takashima (US 2002/0031885).

Figures 13A-13C, 14A, 14B of Takashima disclose a ferroelectric memory device comprising in which a plurality of memory cells each having a transistor and a ferroelectric capacitor are arranged in a matrix, wherein ferroelectric capacitors of one set of memory cells adjacent to each other in the word line direction among the plurality of memory cells are placed at positions offset from each other in the bit line direction (figures 13A-13C), a plate line M_1 is placed in common for the ferroelectric capacitors BE of the set of memory cells, and bit line contacts cAA- M_1 each for connecting a bit line BL and an active region AA of the transistor are placed on both sides of the plate line M_1 in the bit line BL direction.
